

A Model for the Field of Orthopaedics and Trauma Surgery

- The field of Orthopaedics and Trauma Surgery extends to cover prevention and detection, conservative and operative treatment, as well as after-care and rehabilitation for injuries of all kinds and their consequences, in addition to congenital and acquired dysfunctions, deformities, functional disorders and diseases of the supporting and musculoskeletal systems.
- This field's scope also covers interdisciplinary expertise and is applied for all age groups.
- Specialisations of the qualifying doctors serve to achieve the best possible benefits for our patients, with doctors facing changing constantly changing demands when carrying out their tasks. We guarantee expertise from a single source.
- We, as orthopaedists and trauma surgeons, support the well-being and livelihood of our patients, and are dedicated to a treatment which respects the individual needs of each individual, while taking into account each patient's dignity and rights.
- When selecting treatment procedures, we likewise take into consideration knowledge from scientific studies, good clinical practice, as well as the available resources as part of responsible scientific activity.
- We are committed to target-orientated education and advanced training.
- We promote research and teaching as well as implementation of results into practice at the highest level.
- We meet with colleagues from other specialisms on a collaborative basis, and strive for constructive interdisciplinary discussion, and to create and further develop competent interdisciplinary cooperation.
- The patients entrusted to our care are always at the focus of all our efforts.
